I wrote to the Waikato Times in about 1990.

Your article on radiation lacked evidence of many items that show brain damage from electromagnetic fields has adversely affected many children and adults in many countries. The first I recall was a decade ago about a woman in Florida dying from brain damage. She had 'lived' on her cell phone for decades.

The USA book 'The Great Power-Line Cover-Up' shows many cases of electromagnetic fields adversely affecting children at schools from transformers and adults.

At a meeting in Founders between the power authorities and objectors, I quoted from this excellent book, but they made negative statements about the book, and made other typical 'salesmen' claims, which added to my knowledge that you can't believe a salesman, which is what they were.

We had four cordless phones, a cell phone and three computers on wi-fi. I was not feeling well, especially mentally, so turned all off and definitely felt better, and slept much better.

The lights and switches in our bedroom were close to our heads. We got them moved to logen lights in the ceiling.

Wireless Internet routers or Wi-Fi modems use dangerous electromagnetic radiation to send their signals to your computer through walls. If you have a wireless Internet router set up in your home or office (or WiMax, Blue Tooth, Air-Port Extreme, Air-Port Express, Netgear, D-Link, Belkin, Linksys and other wireless network devices) you are receiving massive EMF exposure, and living or working in a dangerous amount of radiation.

Vaughan Jones, ONZM Queen's Honour 2013, for services to farming. 99% Honours in Dairying 1948. NZ Dairy Board award for Waikato Most Improved Dairy Farm 1959. International Agricultural Consultant & Journalist. Represented NZ in Ag Journalist Congresses in USA in 1992 & Austria 1994. Managing Director of the website GrazingInfo Ltd, compiled since 1970.
